GraUMM's Bit.

Well here is the next thrilling instalment ?? Oh sorry getting carried away there.

By the time you read this the K M Motoring Pageant will have come and gone and we will be getting ready for the Welsh Week-End.

The tricky bit is that the Welsh Week-End is at the beginning of August and I have to send the Newsletter out the same time.

so I have sent this one out early so you have no excuse not to come !!

Near the back I have published an up to date membership list including all the New Members and also all those that have not renewed or have Sold there vehicle.

The K M MOTORING PAGEANT.

Friday 2nd, Saturday 3rd & Sunday 4th July 2004.

I arrived around lunch time on Friday and Ernie Darby had promised to get there about the same time but finally arrived around six.

There was already a lot going on and people arriving all the time.

The Show this year appears to be even bigger than last year.

There was a large field of Trade and Auto-Jumble stands.

And an even bigger field of Classic Cars, Vans and Trucks.

The only thing missing as usual was the Club support.

*All products and services are only CLUB
recommendations
and not always genuine UMM Parts.*

*The CLUB take no responsibility
for misuse or mishaps.
Page 1.*

The weather over the week-end was changeable to say the least.
With a few heavy showers scattered throughout the day to make things interesting.

The AUGUST WELSH WEEK-END & GOWER SHOW.

Friday 30th, Saturday 31st July & Sunday 1st August.

As usual Ernie Darby and Co will be traveling up to my place on the Thursday all being well and we will travel down together on the Friday hoping for a late afternoon arrival.

Again this year we will be spending some time at the Gower Show on the Sunday.

Directions as previous Newsletters.
And as usual I can be contacted over the week-end on Mobile
07741-076372.

The NATIONAL 4x4 SHOW.

Friday 20th, Saturday 21st & Sunday 22nd August.

The National 4x4 Show has a new venue this year
and for the next TEN years !! so I am lead to believe.
So here it is

The Shuttleworth Collection.
Shuttleworth College.
Old Warden Park.
Nr Biggleswade.
Bedfordshire.

The directions I have got off the Internet for it say that it's only
2 miles off the A1 Biggleswade Bypass,
And only 30 Miles from Junction 23 of the M25.

Well this is O K if you are coming from the south but how do you get there from any where else.

NUMBER TWELVE An Update.

After getting it on the road there was a lot if back axle noise so this was removed to find the cause.

At the same time one of the rear springs was replaced as this was very soft.

In fact this spring was so bad it went straight in the scrap bin as it was too far gone even to save as parts.

Reassembling the spring I made new center bolts for both springs from two M10 bolts and added an extra leaf each side to compensate for age.

With the axle on the carrier frame I have made to work on them the diff cover was removed and every thing in side removed.

With the diff carrier removed there was a lot of movement in the pinion shaft bearings and the pinion retaining nut was almost tight, Not helping the situation .

Now with the pinion shaft and bearings removed for inspection.

The bearings were sloppy and the running faces were worn and pitted.

Where the pinion shaft had been jiving around weather this time or in a previous existence there was a lot of wear on the pinion teeth and on the crown wheel.

When I removed the pinion end bearing with a bearing separator I discovered that some ham-fisted mechanic

(And I use the word mechanic loosely, very loosely !!)

had removed the previous bearing with an angle grinder.

With the bearing off the shaft you could see how much damage this had done.

After dressing the shaft and fitting a new bearing. New shims were cut to go behind the pinion bearing cup as these were damaged as well.

With the pinion shaft reassembled and reinstalled the diff carrier was lowered in to place and the carrier retaining bolts torqued down.

Due to the wear on the pinion and crown wheel faces there is now some backlash but this will have to remain for now and once running should take any burrs off the gear faces. (we shall see)

With the axle back in place the dampers were replaced with an old spare pair as the originals were leaking.

When I went to put the half-shafts in it was found that the outer wheel bearings were running in the axle housing so I had to center spot the mating surfaces to hold the bearings.

Here's me thinking this is going back together well when I go to adjust the brakes and bleed some air out of the near side wheel cylinder it fails. That's lucky I thought as I have a spare cylinder but I had not taken the work of our mechanical friend in to consideration. Along with a great deal of corrosion.

The original square head adjusters on the rear brakes had been replaced with home made adjusters made from M18 nuts & bolts. The heads of the bolts had been drilled off-centre and taped for an M6 stud as an adjuster peg. The bolts then being put through the back plate and held in place with two lock nuts and an attempt at welding. This would have been OK if the weld had been sufficient but the weld soon failed and the adjusters did not work. After freeing off the adjusters in the back plate I welded the nuts securely in place and now the adjusters work well with a large ring spanner.

The thing that frightens me at times is that people have actually paid some one to do this.

Brakes are one area that you don't cut corners or bodge.
